Important Product Safety Notification : Supco SCM 150 and SCM 60 Surge Protectors

The surge protectors could be installed in three locations:

- **Outdoor Air Conditioning (Condenser) Unit**
- **Furnace (or Air Handler)**
- **Electric Panel**

Note that these surge protectors are hard-wired into the electrical system in your home.

PLEASE DO NOT ATTEMPT TO REMOVE THE SURGE PROTECTOR YOURSELF

Outdoor Air Conditioning Unit

The surge protector will be connected to the electric disconnect box attached to the exterior of your home at or near the outdoor condenser unit.

Furnace (or Air Handler)

The surge protector will be connected to the exterior of the furnace at the point of connection to the electrical wiring in the home.

Electric Panel

The surge protector will be connected to the exterior of the electric panel.

After checking, if you are still unsure whether or not your appliances have a **Supco SCM 150 or SCM 60 Surge Protector**, please contact us to schedule an inspection! All current BelRed customers will receive a free inspection for this device, if needed.
